

Shadow Spot

USED TECHNOLOGIES

In the gallery

- 1) Very simple, fuscia coloured circular spots of self-adhesive vinyl cut-outs, in sizes that vary between 2cm to 15cm in diameter. To be stuck in permement shadow areas around the gallery.
- 2) An open wi-fi connection in the gallery to help visitors upload their images to the server.
- 3) An explanation of how to use Shadow Spot.

For the Server

- 1) We need a web-server with a MySQL database, storage capacity for uploaded photographs, SSH access.
- 2) Mobile device friendly web site.

We will develop the server using Python and Django, Processing, openFrameworks and openCV. Javascript and HTML for the browser.

We will use the narcissus algorithm developed in previous projects.
